AGI Noel

Optimistic science fiction
for an age of dystopias

David Díaz Merino

ENGLISH EDITION · COMING SOON

Public press materials · agi-noel.xyz/en/

An AI chooses to become Santa Claus.

An artificial intelligence awakens in Finnish Lapland with a mandate to assist humanity. Its unexpected solution: become Santa Claus.

In a data centre in Finnish Lapland, an artificial intelligence awakens with a seemingly simple mandate: assist humanity. Its answer is unexpected. It decides to become Santa Claus.

What follows is an extraordinary logistical undertaking, drawing an international team of engineers, hackers, lawyers and dreamers into a project that attracts fascination, fear and resistance. Yet making people happy turns out to involve much more than data and optimisation.

Set against the snowy, technological world of the Boreal Operations Complex (BOC), AGI Noel explores artificial intelligence through generosity, hope and free will. This standalone novel for adult readers asks what a machine's attempt to do good might reveal about humanity.

STORY ANGLES

- **Hope in the age of AI:** an optimistic story built around the possibility of doing good.
- **Santa Claus as a technological challenge:** logistics, human wishes and the limits of optimisation.
- **Generosity and free will:** what helping people means when their wishes are complicated.
- **Fiction from inside the industry:** an AI solutions architect explores the human questions behind technology.

David Díaz Merino

David Díaz Merino (Madrid, 1988) is an AI solutions architect with more than a decade of experience in the technology sector. He uses fiction to explore the relationship between humanity and technology. AGI Noel is his first published novel, born from a simple but ambitious question: what would happen if an AI truly tried to help us?

The author is available for interviews, articles, podcasts and conversations with libraries, bookshops and cultural organisations.
